COVID-19 Resources, Statements & Guidelines - BAPEN

Enteral tube feeds can be administered by bolus, or by intermittent or continuous infusion. 46 Bolus feeding entails administration of 200–400 ml of feed down a feeding tube over 15–60 minutes at regular intervals. The technique may cause bloating and diarrhoea and bolus delivery into the jejunum can cause a “dumping” type syndrome and should therefore be avoided (see section 10.4).
