This book reflects the crisis of development, the associated crises of state and its impact on regional cooperation in South Asia. The resulting political and social unrest, violence and militarisation of state structures are considered in detail. The contributors to this volume focus on the depth of the crises and articulate alternatives available and sustainable in the South Asian context -- the common heritage, the renewable resource base and the available stock of knowledge which enlarges the range of technological options.

This book is a definitive reference source for the growing, increasingly

more important, and interdisciplinary field of computational cognitive modeling, that is, computational psychology. It combines breadth of coverage with definitive statements by leading scientists in this field.

Research in computational cognitive modeling explores the essence of cognition and various cognitive functionalities through developing detailed, process-based understanding by specifying computational mechanisms, structures, and processes. Given the complexity of the human mind and its manifestation in behavioral flexibility, process-based computational models may be necessary to explicate and elucidate the intricate details of the mind. The key to understanding cognitive processes is often in fine details. Computational models provide

algorithmic specificity: detailed, exactly specified, and carefully thought-out steps, arranged in precise yet flexible sequences. These models provide both conceptual clarity and precision at the same time. This book substantiates this approach through overviews and many examples.

This book shows you - through examples and puzzles and intriguing questions - how to make your computer reason logically. The automation of reasoning has advanced markedly in the past few decades, and this book discusses some of the remarkable successes that automated reasoning programs have had in tackling challenging problems in mathematics, logic, program verification, and circuit design. Because the intended audience

includes students and teachers, the book provides many exercises as well as tutorial chapters that introduce readers to the field of logic and to automated reasoning in general. For more advanced researchers, the book presents challenging questions, many of which are still unanswered.

The sheer quantity of widely diverse data which now results from multiple sources presents a problem for decision-makers and analysts, who are finding it impossible to cope with the ever-increasing flow of material. This has potentially serious consequences for the quality of decisions and operational processes in areas such as counterterrorism and security.
