This book constitutes the refereed proceedings of the International Conference on Intelligent Information Systems, IIS 2013, held in Warsaw, Poland in June 2013. The 28 full papers included in this volume were carefully reviewed and selected from 53 submissions. The contributions are organized in topical sections named: Natural language processing, text and Web mining, and machine learning and search.

This text is specifically designed for non-law students studying the law relating to business. Maintaining the accessible approach which has made this book so popular, the authors provide user-friendly explanations to equip students with a good understanding of key legal concepts.

Starting in the early 1970s, a type of programmed cell death called apoptosis began to receive attention. Over the next three decades, research in this area continued at an accelerated rate. In the early 1990s, a second type of programmed cell death, autophagy, came into focus. Autophagy has been studied in mammalian cells for many years. The recen

This book is the crown gem of the Society of Children's Book Writers and Illustrators publications. It contains virtually all the information you will need about writing and illustrating for the children's book

market. It will help you chart your creative work from inception all the way through the process of publishing and marketing. THE BOOK includes the latest market reports, articles on social media, discussions of emerging publishing options, and up-to-the-minute directories of everything from agents to book reviewers to relevant blog sites. Time-sensitive material contained in THE BOOK is updated regularly on our website, scbwi.org. The SCBWI staff takes great pride in presenting you with this invaluable tool that will optimize your career, whether you are already well published or a newcomer to the field. Use it as your primary reference and workbook. THE BOOK is available to current SCBWI members only. Make sure when you order your copy that your name in the shipping address matches your member name so that we can confirm your membership. Members may only order one book at a time.

In this innovative celebration of diversity and affirmation of individuality in animals and humans, Joan Roughgarden challenges accepted wisdom about gender identity and sexual orientation. A distinguished evolutionary biologist, Roughgarden takes on the medical establishment, the Bible, social science—and even Darwin himself. She leads the reader through a fascinating discussion of diversity in gender and sexuality among fish, reptiles, amphibians, birds, and mammals, including primates. Evolution's Rainbow explains how this diversity develops from the action of genes and hormones and how people come to differ from each other in all aspects of body and behavior. Roughgarden reconstructs primary science in light of feminist, gay, and transgender criticism and redefines our understanding of sex, gender, and sexuality. Witty, playful, and daring, this book will revolutionize our understanding of sexuality. Roughgarden argues that principal elements of Darwinian sexual selection theory are false and suggests a new theory that emphasizes social inclusion and control of access to resources and mating opportunity. She disputes a range of scientific and medical concepts, including Wilson's genetic determinism of behavior, evolutionary psychology, the existence of a gay gene, the role of parenting in determining gender identity, and Dawkins's "selfish gene" as the driver of natural selection. She dares social science to respect the agency and rationality of diverse people; shows that many cultures across the world and throughout history accommodate people we label today as lesbian, gay, and transgendered; and calls on the Christian religion to acknowledge the Bible's many passages endorsing diversity in gender and sexuality. Evolution's Rainbow concludes with bold recommendations for improving education in biology, psychology, and medicine; for democratizing genetic engineering and medical practice; and for building a public monument to affirm diversity as one of our nation's defining principles.

This clinical casebook provides a comprehensive yet concise state-of-the-art review of adult critical care medicine. Presented in a case-based format, each case focuses on a scenario commonly encountered with an adult patient in the ICU. Case scenarios include management of seizures and acute intracranial hypertension, sepsis, liver failure, brain death, bleeding and thrombosis, and treating hospital acquired infections in the ICU. Written by experts in the field, *Adult Critical Care Medicine: A Clinical Casebook* is a valuable resource for critical care specialists and practitioners who treat adult patients in critical care settings.

This book examines the ways in which quality management methods, tools, and practices help improve an organization's performance and achieve sustainable competitive advantages. This volume includes quality techniques and tools such as the EFQM Model, SERVPERF model, E-S-Qual scale and the ISO 9001 certification and provide a wide variety of empirical studies in different economic sectors. In the current economic environment, characterized by economic turmoil and fierce competition, quality management has become a key strategy for organizations to overcome today's challenges. Organizations benefit from implementing quality management systems by following two approaches. First, they implement quality practices aimed at ensuring customer satisfaction by considering consumer expectations and establishing strategies accordingly. Second, organizations improve processes by

establishing efficient and effective process management systems that improve productivity, lower costs, reduce unnecessary expenses, eliminate all non-value added activities, and ultimately maximize excellence and customer satisfaction. Quality management thereby provides tools, techniques, and methods for continuous process improvement in both the professional and academic worlds, which, when implemented by organizations in times of crisis, enable more effective administration of activities undertaken by managers. Containing contributions from various academics and scholars, this new book provides cutting edge research, methods and techniques providing a reference manual for academics, scholars, practitioners and policy-makers.

The management of knowledge created in an organization not only enables reuse of knowledge, but also adds value to the organization itself. Preventing duplication of intellectual effort, it saves economic and human resources, leading to the creation of new information. This book gathers the wisdom of knowledge managers and researchers in the context of the library and will be a valuable reference source for all libraries.

An introduction to decision making under uncertainty from a computational perspective, covering both theory and applications ranging from speech recognition to airborne collision avoidance. Many important problems involve decision making under uncertainty—that is, choosing actions based on often imperfect observations, with unknown outcomes. Designers of automated decision support systems must take into account the various sources of uncertainty while balancing the multiple objectives of the system. This book provides an introduction to the challenges of decision making under uncertainty from a computational perspective. It presents both the theory behind decision making models and algorithms and a collection of example applications that range from speech recognition to aircraft collision avoidance. Focusing on two methods for designing decision agents, planning and reinforcement learning, the book covers probabilistic models, introducing Bayesian networks as a graphical model that captures probabilistic relationships between variables; utility theory as a framework for understanding optimal decision making under uncertainty; Markov decision processes as a method for modeling sequential problems; model uncertainty; state uncertainty; and cooperative decision making involving multiple interacting agents. A series of applications shows how the theoretical concepts can be applied to systems for attribute-based person search, speech applications, collision avoidance, and unmanned aircraft persistent surveillance. Decision Making Under Uncertainty unifies research from different communities using consistent notation, and is accessible to students and researchers across engineering disciplines who have some prior exposure to probability theory and calculus. It can be used as a text for advanced undergraduate and graduate students in fields including computer science, aerospace and electrical engineering, and management science. It will also be a valuable professional reference for researchers in a variety of disciplines.

The world of 2017 is unrecognisable. In September, a robot, YuMi (with incredibly expressive nuances) will conduct a Tuscan orchestra while Andrea Bocelli sings Woman is Fickle (La donna è mobile) from Verdi's Rigoletto. University students have invented a 'rowbot' which is faster than the Cambridge and Oxford boat crews in the annual regatta and they are challenging rivals to compete in a new hi-tech event: the Rowbot race. The Australians have developed Hadrian X which can lay 1000 bricks an hour – a task that would take two humans a day or two. De Laval International's cow-milking robot is being deployed in America to challenge the humans! All routine jobs will soon be carried out by robotic machines. This situation is depressing students who are striving to find jobs and feeling overwhelmed by the enormity of life. Education promotes compliant rather than creative learners, employing out-dated teaching models, which aimed to prepare pupils for routine work in factories and other places. Today, these mundane tasks are being taken over by artificial intelligence, so greater attention to learning needs and personal development is required for higher-level work, to be ahead of our new robot rivals! Students must acquire excellent abilities to communicate, collaborate and create, for coping with a

rapidly changing, challenging, complex world. This book is the output of the first UK Doctorates by Professional Record, who have studied present society needs, formulating and implementing new ideas into their practice, to make learning more holistic, relevant and fun! Their suggestions encourage us to reflect, review and refine our present, outdated systems and produce a blue-print for a brave new world. Stories will make you smile at successes and wince at the failures. Sharing experiences, supports, energises and expands learning. The authors hope that students will not leave school hanging on the negatives but will in future be swinging with the positives, that a radical new approach to learning brings for them. Chapters in this book are contributed by: Jonathan Adeniji, Max Coates, Richard Davies, Rob Loe, Pauline Lovelock, Riccarda Matteucci, Elizabeth Negus, Kim Orton, Luke Sage, Rosemary Sage, and Sera Shortland.
