The History. To evaluate syncope, sound clinical decisions are based on a carefully performed history with extreme attention to detail. The history, with its proper interpretation (Table 1) and a directed physical examination, is the only appropriate way to guide further diagnostic evaluation. The history and physical alone can be diagnostic in 25%-35% of patients [1,4,16].

Evaluation of Syncope: An Overview

She subsequently undertook a diploma in Syncope and related Disorders at RCPI, Dublin. She has authored a number of publications related to syncope and PoTS, and her work has shown that GPs often fail to enquire about syncope red flags.

Syncope Spotlight Project

Syncope is a sudden, brief loss of consciousness (LOC) with loss of postural tone followed by spontaneous revival. The patient is motionless and limp and usually has cool extremities, a weak pulse, and shallow breathing. Sometimes brief involuntary muscle jerks occur, resembling a seizure.
