Surface water (streams, lakes, oceans, rivers, etc.) are replaced through precipitation. This can be in the form of rain, snow, hail, and so forth. Snow or ice melt also replenish surface water. In the image below, precipitation is contributing to the surface water: Check out this site to learn about groundwater.

Earth's oceans contain 97% of the planet's water, so just 3% is fresh water, water with low concentrations of salts (Figure below). Most fresh water is trapped as ice in the vast glaciers and ice sheets of Greenland. A storage location for water such as an ocean, glacier, pond, or even the atmosphere is known as a reservoir.
