Refrigerators and freezers (as well as air conditioners, heat pumps, and other appliances that produce “cold”) use basic refrigeration principles to extract heat from the air. To remove heat from the air, a compressor pushes a refrigerant through copper tubing between a condenser and an evaporator coil. Both are located in the appliance.

Check to see if the freezer is touching the wall. If so, move it slightly or re-level it. Remove any items that are on top of the freezer. Check items inside the freezer. It is normal for items inside the freezer to vibrate somewhat. If it seems they're vibrating too much, try re-leveling the freezer or moving it slightly.
